Re: Recent Global Cyberattack / Ransomware

This week the world was faced with yet again another Ransomware attack that affected many industries across the world from shipping to healthcare. In many ways this attack acts like the last. MU IT has already patched majority of our system during the WannaCry attack. We are taking the new threat seriously and working diligently to ensure our data is protected.

We still ask that you users remain vigilant. If you receive an email with an attachment or a link think twice before opening the file or clicking the link. Remember that if you hover over a link in a email message it will show you the linked website. If it looks suspicious or not a Millersville address, please refrain from clicking.

If at any point you have clicked on a link or opened a file, please contact the helpdesk immediately to have them assist with a password reset. Also, if you have become a victim of ransomware on your computer contact the helpdesk immediately.

If you have security questions or concerns please contact the Campus IT Security Specialist via email at security@millersville.edu.
