

HAZMAT TRAINING On Millersville University's Campus April 19-21

Dates: April 19, 20, and 21, 2018

Location: Osburn Hall, Millersville University- Millersville, PA

The Perdue Corp Safety & Security Team has agreed to partner with Millersville University ASSE student section to provide the HAZWOPER training to a group of student section members.

The training will involve both in-class and practical field exercises. The practical field exercise will allow each participant through the use of an incident command system (ICS) to become familiar with donning and doffing PPE, setting up a functioning decontamination operation, control, contain, and mediate a simulated leak and or spill situation. The Perdue will provide all the HAZMAT equipment and additional PPE needed for the training.

This educational exercise is very valuable to the students, the OSEH Program and the university. The engagement with Perdue is an opportunity for industry professionals to bring specialized training into the university.

Jack Ogutu, Ph.D., CSP
Assistant Professor & OSEH Program Coordinator
Dept. of Applied Engineering Safety & Technology
