

Registration Now for the 33rd Annual Summer Science Training Program

The Millersville University College of Science and Technology is pleased to sponsor the 33rd Annual Summer Science Training Program (SSTP). Two distinct five-day tracks of science and math workshops will be taught for different age groups consecutively, with each track consisting of 10 stimulating topics under the STEM umbrella. SSTP provides students with learning opportunities typically not available at the pre-college level through a wide range of academic disciplines and a focus on intensive student-teacher interaction, advanced-level learning, research and problem-solving experiences. The University encourages all academically talented students to include this engaging and enriching mathematics, science, and technology program in their summer schedule.
