

## MU Alert Tested 10/21

[MU Alert](#), the system used by Millersville University to push out emergency text and email messages to campus constituents, will be tested at 11 a.m. on Monday, October 21.

MU Alert is a resource that's been used by the University for a decade. It was created to keep students, faculty and staff safe and informed in the event of an emergency on or near campus. MU Alert is also the fastest/easiest way to find out when there are weather delays or cancellations.

The test is to make sure everyone is receiving the messages. If you haven't signed up, Visit <https://millersville.omnilert.net/subscriber.php> and click on the "create account button in the far top right corner. From there, fill out the information, click "submit," and the website will bring you to its homepage. There will be an option on the page to add a phone number and/or email address to the MU Alert system in order to receive text message and/or email alerts. The screen will then have you submit a verification code that was sent to your phone or email address in order to complete the process.

If you receive the test and no longer need MU Alert, it will have an "opt-out" feature. If you respond to the text with "STOP" - it will deactivate your device and you will no longer receive messages.
