

COMING TO CAMPUS

The process to come to campus just became easier for faculty, staff and students. Effective today, the University has added COVID Screening to the LiveSafe App that is already in place for Millersville University. This new feature replaces the in-person daily screenings at Health Services.

Employees and students should download the LiveSafe App to their smart phone – links are below. Once the app is downloaded every student and employee will be required to answer the screening questions before coming to class and/or campus. Those who complete the questionnaire and do not have symptoms will receive a green checkmark indicating that you are cleared and can report to work or class.

Receiving a red X indicates that you are at risk for COVID. If you get a red X, employees should consult your healthcare provider and supervisor before reporting to campus, and students should contact Health Services before leaving their residence hall or home.

Be prepared to show proof to your supervisor/professor that you have completed the process.

To access LiveSafe you have a variety of options:

- Hover over the QR code below with the camera of your smartphone
- For the Apple App Store click on the graphic below or go to <https://apps.apple.com/us/app/livesafe/id653666211>
- For Google Play click on the graphic below or go to https://play.google.com/store/apps/details?id=com.livesafe.activities&hl=en_US
- Web access - <https://livesafe.jotform.com/202265356232853>

You may also continue to go to Health Services (rear entrance of Witmer) for the screening during regular office hours.
