Take The Chemistry Placement Test Before Registration Begins!
The Chemistry Department added more dates in early November for students to sign up to take the Chemistry Placement Test before registration.

The Chemistry Placement Test aims to determine your general preparedness for studying chemistry, so there is no need to study in advance. There will be 25 multiple choice questions and a 30-min time limit. The test will be conducted in D2L with Zoom proctoring at the specific dates and times outlined on our website. There will be limited slots available for each time, so please register early so your chemistry placement information can be in place for early registration for spring classes.

Full instructions, available time slots, and the web form for registration is available through our website: https://www.millersville.edu/chemistry/cpt.php

WHO NEEDS TO TAKE THE CHEMISTRY PLACEMENT TEST?

- Majors in Chemistry, Biology, Earth Sciences, Physics, MDLV, OR a PREMED in another major will need to take at least CHEM 111.
- You must take the Chemistry Placement Test and have the score on record with the Chemistry Department to be able to register for your first CHEM course. We recommend making arrangements well before the early registration period each semester or in early summer for incoming freshmen.
- Students who received AP/IB credit for CHEM 111 or who have received college transfer credit for a university approved equivalent CHEM 111 course can enroll in chemistry courses without taking the CPT.

QUESTIONS OR CONCERNS?

If you have any questions or concerns, please contact Dr. Aimee Miller.
