

Fire Alarm Diagnostic Audit Project Begins Thursday, October 15, 2020

The fire alarm panels in all academic and administration buildings will be tested as part of a full diagnostic audit of our life safety systems. The inspections will begin on Oct. 15 and take approximately two weeks.

Contractor representatives, working with our facilities staff, will visit each building and test the functionality of every fire alarm panel. The contractors will take every precaution to avoid setting off the building's fire alarms. This project is also being coordinated with local emergency response agencies. All personnel will follow COVID-19 safety precautions.

Starting - Thursday October 15, 2020

Duration - Expected to run for two weeks.

Buildings - All academic and administration buildings
